

PSM 100 Probe Station

Precision Electrical Probing for
Nanoelectronics & Advanced Devices

Accurate Wafer Probing.
Stable Mechanical Positioning.
Built for Research Applications.

The CRYONANO PSM 100 Probe Station is a cost-effective, manual wafer probe station designed for high-precision electrical probing of nanoelectronic and microscale devices. Supporting wafers up to 100 mm (4"), the system is engineered for reliability, stability, and ease of use. It enables accurate, repeatable electrical measurements across wafer-level devices, test boards, and packaged components, making it ideal for R&D laboratories, academic research, and early-stage production testing.

KEY FEATURES

- **Mechanical Stability & Precision**

Rigid mechanical architecture with stable platens supporting up to 6 micro-positioners, integrated vibration isolation, and smooth manual motion for precise, repeatable probe placement.

- **Wafer Handling & Throughput**

Supports wafers up to 100 mm (4") with ergonomic rapid sample exchange optimized for high throughput and ease of operation.

- **Measurement Capability**

Supports I-V, C-V, wafer-level probing, parametric device testing, and electrical failure analysis for both device-level and board-level measurements.

- **Modular Accessory Ecosystem**

Compatible with industry-standard probe arms and probes, optional low-noise cables, calibration tools, and high-resolution top-side microscope alignment.

- **Flexible System Architecture**

Modular and expandable design adaptable for research, prototyping, and test environments with seamless measurement capability expansion.

Notes

- Designed for manual high-precision probing applications
- Measurement accuracy dependent on probe alignment and operator control

APPLICATIONS

- Wafer-level electrical characterization
- Nanoelectronic and 2D material testing
- MEMS and micro-fabricated device probing
- Optoelectronic and photonic device analysis
- Circuit board and packaged device testing
- Failure analysis and process monitoring

PSM 100 Probe Station

SPECIFICATIONS

MECHANICAL & WAFER HANDLING

Wafer Size	Compatibility Up to 100 mm (4")
Positioning	Manual precision stage
Micro-Positioners	Up to 6 supported
Mechanical Stability	High rigidity, vibration-isolated frame
Sample Exchange	Quick, ergonomic access

PROBING & MEASUREMENT

Measurement Types	I-V, C-V, parametric testing
Probing Type	Manual micro-positioning
Contact Precision	Sub-micron capable (operator dependent)
Device Types	Wafer, packaged devices, test boards

ELECTRICAL INTERFACE

Interface Type	Breakout box with BNC connectors
Instrument Compatibility	SMUs, parameter analyzers, multimeters, LCR meters
Signal Integrity	Optimized for low-noise measurements

ACCESSORIES & OPTIONS

Probe Arms	Industry-standard compatible
Cabling	Optional low-noise cables
Optical System	Optional top-side microscope
Calibration	Software-supported positioning tools

SYSTEM CONFIGURATION

Operation	Mode Manual
Architecture	Modular, expandable
Integration	Laboratory instrumentation compatible

Cryonano Labs | Head Office: Sector V, WTL Building, BP-5, BP Block, Sector V, Bidhannagar, Kolkata- 700091
